

# Fertility Booster Test Results \*

**Lot Details** Fertility Booster  
**Serving Size** 2 capsules  
**Manufacture Date** May 2023  
**Lot Number** 3076

MICROBIOLOGICAL ANALYSIS	PASS/FAIL	TEST RESULTS PER SERVING	TEST LIMITS PER SERVING	WHY IS THIS IMPORTANT
Aerobic Plate Count	Pass	< 100 CFU/h	< 10,000 CFU/g	Not all microbes can be counted using this method, but it is widely used as an indicator of quality or sanitation. Higher counts indicate lower quality or questionable sanitary handling practices.
Total Yeast & Mold	Pass	< 100 CFU/g	< 1000 CFU/g	Ruling out the presence of yeast and mold rules out the possibility of allergic reactions or serious compromises for individuals with immunological sensitivities.
Samonella	Pass	Not Detected	Not Detected	Salmonella can cause fever, diarrhea, nausea, vomiting, and abdominal pain. Due to the risks, testing to ensure a product is free from Salmonella is critical to a comprehensive quality and safety program.
Escherichia coli	Pass	Not Detected	Not Detected	Escherichia coli is a species of bacteria that belongs to the Enterobacteriaceae family. While most strains of E. coli are not harmful to humans, a few strains can be pathogenic.
Coliform	Pass	< 10 CFU/g	< 100 CFU/g	Coliform refers to a broad group of bacteria found in the environment, soil, water, and the digestive tracts of animals and humans. They are commonly used to indicate water or food quality and can indicate potential fecal contamination if detected.

MICROBIOLOGICAL ANALYSIS	PASS/FAIL	TEST RESULTS PER SERVING	TEST LIMITS PER SERVING	WHY IS THIS IMPORTANT
Enterobacteriaceae	Pass	Not Detected	Not Detected	Enterobacteriaceae count measures the cleanliness of ingredients and processing areas to prevent harm from pathogenic bacteria.
HEAVY METALS	PASS/FAIL	TEST RESULTS PER SERVING	TEST LIMITS PER SERVING	WHY IS THIS IMPORTANT
Arsenic	Pass	0.029 ppm	<13.333 ppm	Testing for arsenic ensures products do not contain more than the established acceptable level of arsenic. Long-term, excessive exposure to arsenic has known health risks.
Cadmium	Pass	0.013 ppm	<5.467 ppm	Excess cadmium exposure can result in an accumulation of cadmium in the body, which in turn can have detrimental effects on the kidneys, lungs, bones, and possibly fetal development; it's also classified as a human carcinogen by various agencies.
Lead	Pass	0.060 ppm	<0.667 ppm	Excess lead exposure can lead to lead toxicity, which can affect every organ in the human body and cause brain damage, kidney disease, blood disorders, heart disease, and reproductive disease.
Mercury	Pass	0.008 ppm	<2.667 ppm	Mercury can cause damage to the nervous system, digestive and immune systems, lungs, kidneys, skin, and eyes. Testing to ensure mercury levels are below the recommended rate ensures consumers are protected from the toxic risks of mercury.
ALLERGEN TESTING	PASS/FAIL	TEST RESULTS PER SERVING	TEST LIMITS PER SERVING	WHY IS THIS IMPORTANT
Gluten	Pass	<3.0 ppm	20 ppm	Celiac disease and food intolerances to gluten from wheat, rye, and barley affect many people. Testing ensures that consumers who have allergies or sensitivities are protected.

ALLERGEN TESTING	PASS/FAIL	TEST RESULTS PER SERVING	TEST LIMITS PER SERVING	WHY IS THIS IMPORTANT
Allergen Screen (Milk, Peanut, Wheat, Tree Nut, Eggs, Shellfish, Fish, Soy, Corn)	Pass	Not Detected	Not Detected	Food allergies and other types of food hypersensitivities affect a great number of people and can vary in severity from mild symptoms involving hives and lip swelling to severe, life-threatening symptoms, often called anaphylaxis, that may involve fatal respiratory problems and shock. Testing ensures that consumers who have allergies or sensitivities are protected.

\*We use third-party testing through Eurofins to verify these results and ensure accuracy. Results have been transcribed into an easy-to-understand format.
