

# Women's Prenatal Test Results

**Lot Details** Prenatal Multivitamin  
**Serving Size** 8 capsules  
**Manufacturing Date** June 2024  
**Lot Number** W0038504

## MICROBIOLOGICAL ANALYSIS

	PASS/FAIL	TEST RESULTS	TEST LIMITS	WHY IS THIS IMPORTANT
<b>E. Coli</b>	Pass	Absent	Absent/10 g	Escherichia coli is a species of bacteria that belongs to the Enterobacteriaceae family. While most strains of E. coli are not harmful to humans, a few strains can be pathogenic.
<b>Yeast &amp; Mold</b>	Pass	<10 CFU/g	<500 CFU/g	Ruling out the presence of yeast and mold rules out the possibility of allergic reactions or serious compromises for individuals with immunological sensitivities.
<b>S. aureus</b>	Pass	Absent	Absent/10 g	Staphylococcus aureus is the most common species of Staphylococcus to cause Staph infections. It can cause a range of illnesses, from minor skin infections to abscesses and cellulitis due to complications of diabetes or surgical site infections.
<b>Salmonella</b>	Pass	Absent	Absent/10 g	Salmonella can cause fever, diarrhea, nausea, vomiting, and abdominal pain. Due to the risks, testing to ensure a product is free from Salmonella is critical to a comprehensive quality and safety program.
<b>Total Plate Count</b>	Pass	<10 CFU/g	<5000 CFU/g	Not all microbes can be counted using this method, but it is widely used as an indicator of quality or sanitation. Higher counts indicate lower quality or questionable sanitary handling practices.

HEAVY METALS	PASS/FAIL	TEST RESULTS	TEST LIMITS	WHY IS THIS IMPORTANT
<b>Arsenic</b>	Pass	5.22 mcg/daily serving	< 10 mcg/daily serving	Testing for arsenic ensures products do not contain more than the established acceptable level of arsenic. Long-term, excessive exposure to arsenic has known health risks.
<b>Cadmium</b>	Pass	0.545 mcg/daily serving	< 4.1 mcg/daily serving	Excess cadmium exposure can result in an accumulation of cadmium in the body, which in turn can have detrimental effects on the kidneys, lungs, bones, and possibly fetal development; it's also classified as a human carcinogen by various agencies.
<b>Lead</b>	Pass	0.186 mcg/daily serving	< 0.5 mcg/daily serving	Excess lead exposure can lead to lead toxicity, which can affect every organ in the human body and cause brain damage, kidney disease, blood disorders, heart disease, and reproductive disease.
<b>Mercury</b>	Pass	0.034 mcg/daily serving	< 2.0 mcg/daily serving	Mercury can cause damage to the nervous system, digestive and immune systems, lungs, kidneys, skin, and eyes. Testing to ensure mercury levels are below the recommended rate ensures consumers are protected from the toxic risks of mercury.
ALLERGEN TESTING	PASS/FAIL	TEST RESULTS	TEST LIMITS	WHY IS THIS IMPORTANT
<b>Almond</b>	Pass	Not detected	< 10 ppm**	Almond allergies and intolerances affect many people and can vary from mild to severe, life-threatening symptoms. Testing ensures that consumers who have allergies or sensitivities are protected.
<b>Sesame</b>	Pass	Not detected	< 10 ppm**	Sesame allergies and intolerances, ranging from mild to severe, can pose life-threatening risks. Testing safeguards consumers with allergies or sensitivities.
<b>Tropomyosin from Crustaceans</b>	Pass	Not detected	< 10 ppm**	The main molluscan allergen is the muscle protein tropomyosin. This allergen can also be found in crustaceans, dust mites, and insects. Testing ensures that consumers who have allergies or sensitivities are protected.

ALLERGEN TESTING	PASS/FAIL	TEST RESULTS	TEST LIMITS	WHY IS THIS IMPORTANT
Gluten	Pass	Not detected	<20.0 ppm	Celiac disease and food intolerances to gluten from wheat, rye, and barley affect many people. Testing ensures that consumers who have allergies or sensitivities are protected.
Soy	Pass	Not detected	< 10 ppm**	Testing for soy ensures the detection of commercialized and approved varieties of soy, including those that do not contain the common screening elements.
B-lactoglobulin Dairy	Pass	Not detected	< 10 ppm**	Dairy allergies and intolerances affect many people and can vary from mild to severe, life-threatening symptoms. Testing ensures that consumers who have allergies or sensitivities are protected.
Egg	Pass	Not detected	< 10 ppm**	Egg allergies and intolerances affect many people and can vary from mild to severe, life-threatening symptoms. Testing ensures that consumers who have allergies or sensitivities are protected.
Peanut	Pass	Not detected	< 10 ppm**	Peanut allergies and intolerances affect many people and can vary from mild to severe, life-threatening symptoms. Testing ensures that consumers who have allergies or sensitivities are protected.
Walnut	Pass	Not detected	< 10 ppm**	Walnut allergies and intolerances affect many people and can vary from mild to severe, life-threatening symptoms. Testing ensures that consumers who have allergies or sensitivities are protected.
Fish DNA	Pass	Not detected	<10 ppm**	Fish allergies affect a significant number of people. However, testing ensures that commonly consumed seafood and exotic species are undetected.

OTHER CONTAMINANTS	PASS/FAIL	TEST RESULTS	TEST LIMITS	WHY IS THIS IMPORTANT
Glyphosate	Pass	Not Detected	<0.1 ppm	Glyphosate is a herbicide used to control weeds in agriculture, public and industrial areas, and in home gardens. Testing ensures that consumers are not exposed to this herbicide.
BPA	Pass	Not Detected	<0.04 ppm	Bisphenol A (BPA) is used to manufacture polycarbonate plastics. BPA has been shown to affect the reproductive systems of laboratory animals. Testing ensures that consumers are not exposed to this compound.

\*We use third-party testing through Eurofins, and other fully qualified, ISO 17025 accredited laboratories, to verify these results and ensure accuracy. Results have been transcribed into an easy-to-understand format.
